## Part III

Allow a total of 15 credits for only three of the five groups in this part. If all five groups are answered, only the first three should be considered.

## Group 1

110-111

## Rating instructions for questions 110-111

110 Allow one credit for marking an appropriate scale on each labeled axis.
111 Allow one credit for plotting the data correctly, surrounding each point with a small circle, and connecting the points.
$112123 \times$
The answer below represents a sample response. Other correct complete-sentence responses are acceptable. Allow no partial credit.

113 As the number of trials increased, the reaction time decreased.
$114 \times 234$

## Group 2

```
115 1 $ $ 3 4
116 1 2 x 4
117 1 2 3 X
\(118 \times 234\)
\(119 \quad 1 \quad 2 \times 4\)
```

## Part II

Allow a total of $\mathbf{2 0}$ credits, one credit for each question, for only two of the five groups in this part. If more than two groups are answered, only the first two should be considered.

## Directions to the Teacher:

Use only red ink or red pencil in rating Regents examination papers. Do not correct the student's work by making insertions or changes of any kind.

Scan each answer paper to make certain that the student has marked only one answer for each question. If a student has marked two or more answers with an X in ink, draw a red line through the row of numbers for that question to indicate that no credit is to be allowed for that question when the answer paper is scored.

To facilitate scoring, the scoring key has been printed in the same format as the answer paper. The scoring key for Part I and Part II may be made into a scoring stencil by punching out the correct answers. Be sure that the stencil is aligned with the answer paper so that the holes correspond to the correct answers. To aid in proper alignment, punch out the first and last item numbers in each part and place the stencil on the answer paper so that these item numbers appear through the appropriate holes.

## Group 3

$120 \times 234$
$\begin{array}{lllll}121 & 1 & 2\end{array}$
$\begin{array}{lllll}122 & 1 & 3 & 4\end{array}$
$123 \times 234$
The answers below represent sample responses. Other correct complete-sentence responses are acceptable. Allow no partial credit.
124 A-It is the organelle in which photosynthesis takes place.
$B$-It is the organelle which stores materials.
or
$C$-It directs the activities of the cell.

## Group 4

$\begin{array}{lllll}125 & 1 & 2 & X & 4\end{array}$
$\begin{array}{lllll}126 & X & 2 & 4\end{array}$
$\begin{array}{lllll}127 & 1 & 2 & \mathbf{X}\end{array}$
$\begin{array}{lllll}128 & 1 & X & 3 & 4\end{array}$
The answer below represents a sample response. Other correct complete-sentence responses are acceptable. Allow no partial credit.
129 The conclusion is not valid because it is based on a study of red blood cells from only one vertebrate species.

## Group 5

The answer below represents a sample response. Other correct complete-sentence responses are acceptable. Allow no partial credit.
130 The experimental setup has more than one variable.
$131 \quad 1 \quad 2 \quad 3 \quad X$
The answers below represent sample responses. Other correct complete-sentence responses are acceptable. Allow no partial credit.
132 Set 1 - This set could be used to test a substance for the presence of monosaccharides.
or
Set 2 - This set could be used to test for the presence of a fat.
Set 3 - This set could be used to study the role of $\mathrm{CO}_{2}$ in an experiment.
