A teacher wrote the following set of numbers on the board:

\[ a = \sqrt{20} \quad b = 2.5 \quad c = \sqrt{225} = 15 \]

Irrational  Rational  Rational

Explain why \( a + b \) is irrational, but \( b + c \) is rational.

Score 2: The student gave a complete and correct response.
A teacher wrote the following set of numbers on the board:

\[ a = \frac{\sqrt{20}}{11}, \quad b = 2.5, \quad c = \frac{\sqrt{225}}{12} \]

Explain why \( a + b \) is irrational, but \( b + c \) is rational.

\[ a + b \text{ is Irrational because the sum of an irrational and a rational is an irrational number} \]

\[ b + c \text{ is Rational because the sum of two rational numbers is rational} \]

**Score 2:** The student gave a complete and correct response.
25 A teacher wrote the following set of numbers on the board:

\[ a = \sqrt{20} \quad b = 2.5 \quad c = \sqrt{225} \]

Explain why \( a + b \) is irrational, but \( b + c \) is rational.

\[ a + b = 6.97213... \]
\[ \text{it does not end or repeat} \]
\[ b + c = 17.5 \]
\[ \text{it ends} \]

Score 2: The student gave a complete and correct response.
A teacher wrote the following set of numbers on the board:

\[ a = \sqrt{20} \quad b = 2.5 \quad c = \sqrt{225} \]

Explain why \( a + b \) is irrational, but \( b + c \) is rational.

The reason is that "\( a \)" is a irrational number. A irrational + rational number = irrational.

\[
\sqrt{20} \approx 4.472135955
\]
25 A teacher wrote the following set of numbers on the board:

\[ a = \sqrt{20} \quad b = 2.5 \quad c = \sqrt{225} \]

Explain why \( a + b \) is irrational, but \( b + c \) is rational.

\[ \sqrt{20} + 2.5 \quad \text{6.10} \]

\[ 2.5 + \sqrt{225} \quad \text{17.5} \]

\( a + b \) is irrational because the square root comes first.

\( b + c \) is rational because the square root is last.

**Score 0:** The student wrote two incorrect explanations.
26 Determine and state whether the sequence 1, 3, 9, 27, ... displays exponential behavior. Explain how you arrived at your decision.

The sequence displays exponential behavior because each number is a power of 3.

Score 2: The student gave a complete and correct response.
Question 26

26 Determine and state whether the sequence 1, 3, 9, 27, … displays exponential behavior. Explain how you arrived at your decision.

Yes, this sequence displays exponential behavior. I explain this with my work above. As my exponent on $3^x$ went up from 0 to 2, I got the first three numbers in the sequence.

Score 2: The student gave a complete and correct response.
26 Determine and state whether the sequence 1, 3, 9, 27, … displays exponential behavior. Explain how you arrived at your decision.

It has a common ratio of 3.

Score 1: The student did not indicate a positive response in the explanation.
26 Determine and state whether the sequence 1, 3, 9, 27,… displays exponential behavior. Explain how you arrived at your decision.

Because it goes up by three every time.

Score 0: The student did not indicate a positive response and wrote an incorrect explanation.
27 Using the formula for the volume of a cone, express \( r \) in terms of \( V \), \( h \), and \( \pi \).

\[
V = \frac{1}{3} \pi r^2 h
\]

\[
3V = \pi r^2 h
\]

\[
\frac{3V}{\pi h} = r^2
\]

\[
r = \sqrt[2]{\frac{3V}{\pi h}}
\]

**Score 2:** The student gave a complete and correct response.
27 Using the formula for the volume of a cone, express $r$ in terms of $V$, $h$, and $\pi$.

\[ V = \frac{1}{3} \pi r^2 h \]

\[ \sqrt{\frac{V}{\frac{1}{3} \pi h}} = r \]

**Score 2:** The student gave a complete and correct response.
Question 27

27 Using the formula for the volume of a cone, express $r$ in terms of $V, h,$ and $\pi$. 

\[
\frac{V}{h} = \frac{1}{3} \pi r^2 \sqrt{\frac{V}{\pi h}} \\
\frac{V}{\pi h} = \frac{1}{3} \pi r^2 \\
\frac{V}{\pi h} = \frac{1}{3} \\
\sqrt{\frac{V}{\pi h}} = r \\
\sqrt{\frac{V}{1.047197551 h}} = r
\]

Score 1:  The student did not leave the answer in terms of $\pi$. 

Question 27

27 Using the formula for the volume of a cone, express $r$ in terms of $V$, $h$, and $\pi$.

\[
V = \frac{1}{3} \pi r^2 h
\]

\[
\frac{3V}{\pi h} = r^2
\]

\[
\pm \sqrt{\frac{3V}{\pi h}} = r
\]

Score 1: The student did not understand that the length of the radius can only be a positive number.
27 Using the formula for the volume of a cone, express $r$ in terms of $V$, $h$, and $\pi$.

**Volume of a cone:**

\[
V = \frac{1}{3}\pi r^2 h
\]

\[
h = \frac{1}{3}\pi r^2 V
\]

**Score 0:** The student wrote an incorrect response.
The graph below models the cost of renting video games with a membership in Plan A and Plan B.

Explain why Plan B is the better choice for Dylan if he only has $50 to spend on video games, including a membership fee.

He gets 2 more video games

Bobby wants to spend $65 on video games, including a membership fee. Which plan should he choose? Explain your answer.

Either because both plans (A & B) have 20 games when $65 is spent.

Score 2: The student gave a complete and correct response.
The graph below models the cost of renting video games with a membership in Plan A and Plan B.

Explain why Plan B is the better choice for Dylan if he only has $50 to spend on video games, including a membership fee.

With Plan B, he can buy 14 games with $50.
With Plan A, he can only buy 12 games with $50.

Bobby wants to spend $65 on video games, including a membership fee. Which plan should he choose? Explain your answer.

It wouldn't matter which plan he uses because they both offer 20 games for $65.

Score 2: The student gave a complete and correct response.
Question 28

28 The graph below models the cost of renting video games with a membership in Plan A and Plan B.

![Graph showing cost vs. number of games for Plan A and Plan B]

Explain why Plan B is the better choice for Dylan if he only has $50 to spend on video games, including a membership fee.

Plan B starts less expensive and has a slower rate.

Bobby wants to spend $65 on video games, including a membership fee. Which plan should he choose? Explain your answer.

Plan B as he would get the same amount of games for each.

Score 1: The student wrote a correct explanation for Bobby.
Question 28

28 The graph below models the cost of renting video games with a membership in Plan A and Plan B.

Explain why Plan B is the better choice for Dylan if he only has $50 to spend on video games, including a membership fee.

Plan B is the better choice for Dylan because in this plan he can get more games. Plan B gets him 14 games for $50 and Plan A gets him about 13.

Bobby wants to spend $65 on video games, including a membership fee. Which plan should he choose? Explain your answer.

Bobby should choose Plan B because if he wanted to spend less than his $65 he will get better prices.

Score 1: The student wrote a correct explanation for Dylan.
28 The graph below models the cost of renting video games with a membership in Plan A and Plan B.

Explain why Plan B is the better choice for Dylan if he only has $50 to spend on video games, including a membership fee.

He gets more games

Bobby wants to spend $65 on video games, including a membership fee. Which plan should he choose? Explain your answer.

They are the same.

Score 0:  The student wrote two incomplete explanations.
Samantha purchases a package of sugar cookies. The nutrition label states that each serving size of 3 cookies contains 160 Calories. Samantha creates the graph below showing the number of cookies eaten and the number of Calories consumed.

Explain why it is appropriate for Samantha to draw a line through the points on the graph.

Samantha should connect the dots because she can consume 1 cookie or 2 cookies or a part of a cookie and if she does the correct number of calories would correspond with the number of cookies she ate.

Score 2: The student gave a complete and correct response.
29 Samantha purchases a package of sugar cookies. The nutrition label states that each serving size of 3 cookies contains 160 Calories. Samantha creates the graph below showing the number of cookies eaten and the number of Calories consumed.

![Graph](image)

Explain why it is appropriate for Samantha to draw a line through the points on the graph.

No, because Samantha cannot eat a claimed amount of cookies, so if the were to connect the graph, this would indicate that all points on the line were included.

**Score 1:** The student did not understand that a part of a cookie could be consumed.
Samantha purchases a package of sugar cookies. The nutrition label states that each serving size of 3 cookies contains 160 Calories. Samantha creates the graph below showing the number of cookies eaten and the number of Calories consumed.

Explain why it is appropriate for Samantha to draw a line through the points on the graph.

Yes to show that the calories increase

Score 0: The student wrote an irrelevant explanation.
Question 30

30 A two-inch-long grasshopper can jump a horizontal distance of 40 inches. An athlete, who is five feet nine, wants to cover a distance of one mile by jumping. If this person could jump at the same ratio of body-length to jump-length as the grasshopper, determine, to the nearest jump, how many jumps it would take this athlete to jump one mile.

\[
\text{5 feet 9 inches} \\
\times 12 \\
60 + 9 = 69 \text{ inches tall} \\
\frac{69}{2} = 34.5 \\
34.5 \times 40 = 1380 \text{ inches} \\
\text{a mile is 63360 inches} \\
\frac{63360}{1380} = 45.9 = 46
\]

It would take the athlete 46 jumps to reach a distance of one mile.

Score 2: The student gave a complete and correct response.
30 A two-inch-long grasshopper can jump a horizontal distance of 40 inches. An athlete, who is five feet nine, wants to cover a distance of one mile by jumping. If this person could jump at the same ratio of body-length to jump-length as the grasshopper, determine, to the nearest jump, how many jumps it would take this athlete to jump one mile.

\[
\text{Grasshopper jumps 20 times its length}
\]

\[
5'9'' \times 20 = 100'180'' = 115' \]

\[
\frac{5280}{115} \approx 45.913 \approx 46
\]

**Score 2:** The student gave a complete and correct response.

Based on the frequency table created, draw and label a frequency histogram on the grid below.

Determine and state which interval contains the upper quartile. Justify your response.

Score 0: The student did not show enough correct work to receive any credit.
35 Solve the following system of inequalities graphically on the grid below and label the solution $S$.

Is the point $(3,7)$ in the solution set? Explain your answer.

No, because it's on the line and it's only a more than or equal to, so it's not included.

Score 4: The student gave a complete and correct response.
35 Solve the following system of inequalities graphically on the grid below and label the solution $S$.

$$3x + 4y > 20$$
$$x < 3y - 18$$

Is the point $(3,7)$ in the solution set? Explain your answer.

No, because point $(3,7)$ is on the line of $y = \frac{3x}{2} + 6$, but the original equation is $y < \frac{3x}{2} + 6$ which solutions are not including the points on it’s line.

Score 3: The student did not reverse the inequality symbol when dividing by a negative.
35 Solve the following system of inequalities graphically on the grid below and label the solution $S$.

$$3x + 4y > 20$$
$$x < 3y - 18$$

Is the point (3,7) in the solution set? Explain your answer.

yes because the point is on the line

Score 2: Appropriate work is shown, but the solution is not labeled and an incorrect explanation is written.
Question 35

35 Solve the following system of inequalities graphically on the grid below and label the solution S.

\[\begin{align*}
3x + 4y &> 20 \\
x &< 3y - 18
\end{align*}\]

Is the point (3,7) in the solution set? Explain your answer.

Score 1: The student wrote a correct explanation based on an algebraic justification.
35 Solve the following system of inequalities graphically on the grid below and label the solution $S$.

\[
\begin{align*}
3x + 4y &> 20 \\
x &< 3y - 18
\end{align*}
\]

Is the point $(3,7)$ in the solution set? Explain your answer.

No, because points on each line are not included in the answer.

**Score 1:** The student graphed both inequalities using solid lines and did not label the solution set. The explanation is incorrect based on their graph.
35 Solve the following system of inequalities graphically on the grid below and label the solution $S$.

\[ \begin{align*}
3x + 4y &> 20 \\
-3x + y &< 18
\end{align*} \]

Is the point (3,7) in the solution set? Explain your answer.

Score 0: The student did not show any correct work.
An Air Force pilot is flying at a cruising altitude of 9000 feet and is forced to eject from her aircraft. The function \( h(t) = -16t^2 + 128t + 9000 \) models the height, in feet, of the pilot above the ground, where \( t \) is the time, in seconds, after she is ejected from the aircraft.

Determine and state the vertex of \( h(t) \). Explain what the second coordinate of the vertex represents in the context of the problem.

After the pilot was ejected, what is the maximum number of feet she was above the aircraft’s cruising altitude? Justify your answer.

Score 4: The student gave a complete and correct response.
An Air Force pilot is flying at a cruising altitude of 9000 feet and is forced to eject from her aircraft. The function \( h(t) = -16t^2 + 128t + 9000 \) models the height, in feet, of the pilot above the ground, where \( t \) is the time, in seconds, after she is ejected from the aircraft.

Determine and state the vertex of \( h(t) \). Explain what the second coordinate of the vertex represents in the context of the problem.

\[
(4, 9756)
\]

The peak of the pilot's height above the ground after ejection from the plane.

After the pilot was ejected, what is the maximum number of feet she was above the aircraft's cruising altitude? Justify your answer.

\[256 \text{ ft.}\]

\[
\begin{array}{c}
9256 \\
-9000 \\
\hline
256
\end{array}
\]

Score 4: The student gave a complete and correct response.
An Air Force pilot is flying at a cruising altitude of 9000 feet and is forced to eject from her aircraft. The function $h(t) = -16t^2 + 128t + 9000$ models the height, in feet, of the pilot above the ground, where $t$ is the time, in seconds, after she is ejected from the aircraft.

Determine and state the vertex of $h(t)$. Explain what the second coordinate of the vertex represents in the context of the problem.

After the pilot was ejected, what is the maximum number of feet she was above the aircraft’s cruising altitude? Justify your answer.

Score 3: The student wrote an incorrect explanation.
36 An Air Force pilot is flying at a cruising altitude of 9000 feet and is forced to eject from her aircraft. The function $h(t) = -16t^2 + 128t + 9000$ models the height, in feet, of the pilot above the ground, where $t$ is the time, in seconds, after she is ejected from the aircraft.

Determine and state the vertex of $h(t)$. Explain what the second coordinate of the vertex represents in the context of the problem.

Score 2: The student stated a correct vertex and wrote a correct explanation.
36 An Air Force pilot is flying at a cruising altitude of 9000 feet and is forced to eject from her aircraft. The function $h(t) = -16t^2 + 128t + 9000$ models the height, in feet, of the pilot above the ground, where $t$ is the time, in seconds, after she is ejected from the aircraft.

Determine and state the vertex of $h(t)$. Explain what the second coordinate of the vertex represents in the context of the problem.

$$h(t) = -16t^2 + 128t + 9000$$

$$v = \frac{-b}{2a} = \frac{-128}{2(-16)} = \frac{128}{32} = 4$$

$$h(4) = -16(4)^2 + 128(4) + 9000 = 9256$$

$$v(4) = -256 + 512 + 9000 = 9256$$

After the pilot was ejected, what is the maximum number of feet she was above the aircraft’s cruising altitude? Justify your answer.

$$\frac{9256 - 9000}{256} = \frac{256}{256} = 1$$

**Score 2:** The student stated the vertex incorrectly and wrote no explanation.

\]

Vertex: 4

The \( y \) coordinate represents the height ejected from.

After the pilot was ejected, what is the maximum number of feet she was above the aircraft’s cruising altitude? Justify your answer.

9000 feet.

Score 0: The student did not show enough work to receive any credit.
Zeke and six of his friends are going to a baseball game. Their combined money totals $28.50. At the game, hot dogs cost $1.25 each, hamburgers cost $2.50 each, and sodas cost $0.50 each. Each person buys one soda. They spend all $28.50 on food and soda.

Write an equation that can determine the number of hot dogs, \( x \), and hamburgers, \( y \), Zeke and his friends can buy.

\[
28.5 - 3.5 = 25
\]

\[
25 = 1.25x + 2.5y
\]

Graph your equation on the grid below.

Determine how many different combinations, including those combinations containing zero, of hot dogs and hamburgers Zeke and his friends can buy, spending all $28.50. Explain your answer.

There are 11 different combinations because each dot on the above graph represents one combination.

Score 6: The student gave a complete and correct response.
37 Zeke and six of his friends are going to a baseball game. Their combined money totals $28.50. At the game, hot dogs cost $1.25 each, hamburgers cost $2.50 each, and sodas cost $0.50 each. Each person buys one soda. They spend all $28.50 on food and soda.

Write an equation that can determine the number of hot dogs, $x$, and hamburgers, $y$, Zeke and his friends can buy.

$$1.25x + 2.5y = 28.5 - 7(0.50)$$

$$\Rightarrow 1.25x + 2.5y = 25$$

$$y = -0.5x + 10$$

Graph your equation on the grid below.

Determine how many different combinations, including those combinations containing zero, of hot dogs and hamburgers Zeke and his friends can buy, spending all $28.50. Explain your answer.

**Score 5:** The student labeled the axes incorrectly.
Zeke and six of his friends are going to a baseball game. Their combined money totals $28.50.

At the game, hot dogs cost $1.25 each, hamburgers cost $2.50 each, and sodas cost $0.50 each. Each person buys one soda. They spend all $28.50 on food and soda.

Write an equation that can determine the number of hot dogs, \(x\), and hamburgers, \(y\), Zeke and his friends can buy.

\[
1.25x + 2.50y + 3.50 \leq 28.50
\]

Graph your equation on the grid below.

Determine how many different combinations, including those combinations containing zero, of hot dogs and hamburgers Zeke and his friends can buy, spending all $28.50. Explain your answer.

121 combinations

because any integer solution in my solution set will work

Score 5: The student made an error by using an inequality to model the scenario.
37 Zeke and six of his friends are going to a baseball game. Their combined money totals $28.50. At the game, hot dogs cost $1.25 each, hamburgers cost $2.50 each, and sodas cost $0.50 each. Each person buys one soda. They spend all $28.50 on food and soda.

Write an equation that can determine the number of hot dogs, $x$, and hamburgers, $y$, Zeke and his friends can buy.

$$2.5x + 1.25y = 25$$

Graph your equation on the grid below.

Determine how many different combinations, including those combinations containing zero, of hot dogs and hamburgers Zeke and his friends can buy, spending all $28.50. Explain your answer.

Score 5:  The student made a transcription error by reversing the $x$ and $y$ when writing the equation. All other work was appropriate.
Zeke and six of his friends are going to a baseball game. Their combined money totals $28.50. At the game, hot dogs cost $1.25 each, hamburgers cost $2.50 each, and sodas cost $0.50 each. Each person buys one soda. They spend all $28.50 on food and soda.

Write an equation that can determine the number of hot dogs, \( x \), and hamburgers, \( y \), Zeke and his friends can buy.

\[
1.25x + 2.50y + 3.50 = 28.50 \\
1.25x + 2.50y = 25.00
\]

Graph your equation on the grid below.

Determine how many different combinations, including those combinations containing zero, of hot dogs and hamburgers Zeke and his friends can buy, spending all $28.50. Explain your answer.

Score 4: The student wrote a correct equation and used it to determine the number of combinations. The student wrote an explanation.
Zeke and six of his friends are going to a baseball game. Their combined money totals $28.50. At the game, hot dogs cost $1.25 each, hamburgers cost $2.50 each, and sodas cost $0.50 each. Each person buys one soda. They spend all $28.50 on food and soda.

Write an equation that can determine the number of hot dogs, $x$, and hamburgers, $y$, Zeke and his friends can buy.

$$28.50 = 0.50(7) + 1.25x + 2.50y$$

Graph your equation on the grid below.

Determine how many different combinations, including those combinations containing zero, of hot dogs and hamburgers Zeke and his friends can buy, spending all $28.50. Explain your answer.

28 different combinations. There are 7 friends and two options for two items.

Score 3: The student made an error by using an inequality to model the scenario. The student graphed the correct equation.
37 Zeke and six of his friends are going to a baseball game. Their combined money totals $28.50. At the game, hot dogs cost $1.25 each, hamburgers cost $2.50 each, and sodas cost $0.50 each. Each person buys one soda. They spend all $28.50 on food and soda.

Write an equation that can determine the number of hot dogs, \( x \), and hamburgers, \( y \), Zeke and his friends can buy.

\[1.25x + 2.5y = 28.5\]

Graph your equation on the grid below.

Determine how many different combinations, including those combinations containing zero, of hot dogs and hamburgers Zeke and his friends can buy, spending all $28.50. Explain your answer.

Score 2: The student wrote a correct equation.
Zeke and six of his friends are going to a baseball game. Their combined money totals $28.50. At the game, hot dogs cost $1.25 each, hamburgers cost $2.50 each, and sodas cost $0.50 each. Each person buys one soda. They spend all $28.50 on food and soda.

Write an equation that can determine the number of hot dogs, \( x \), and hamburgers, \( y \), Zeke and his friends can buy.

\[ y = x + 2.5 \]

Graph your equation on the grid below.

Determine how many different combinations, including those combinations containing zero, of hot dogs and hamburgers Zeke and his friends can buy, spending all $28.50. Explain your answer.

Score 1: The student wrote a justification for 11, not an explanation.
37 Zeke and six of his friends are going to a baseball game. Their combined money totals $28.50. At the game, hot dogs cost $1.25 each, hamburgers cost $2.50 each, and sodas cost $0.50 each. Each person buys one soda. They spend all $28.50 on food and soda.

Write an equation that can determine the number of hot dogs, $x$, and hamburgers, $y$, Zeke and his friends can buy.

$$F(x) = 7x + 0.50$$

Graph your equation on the grid below.

Determine how many different combinations, including those combinations containing zero, of hot dogs and hamburgers Zeke and his friends can buy, spending all $28.50. Explain your answer.

$$1.25(7) + 2.50(7) = 26.25$$

Each person can buy one hotdog and one hamburger to come up with a total of $26.25.

Score 0: The student did not show any correct work.
