LIVING ENVIRONMENT

The University of the State of New York

REGENTS HIGH SCHOOL EXAMINATION

LIVING ENVIRONMENT

Tuesday, June 24, 2008 — 9:15 a.m. to 12:15 p.m., only

Student Name ________________________________________________________________

School Name ________________________________________________________________

Print your name and the name of your school on the lines above. Then turn to the last page of this booklet, which is the answer sheet for Part A and Part B–1. Fold the last page along the perforations and, slowly and carefully, tear off the answer sheet. Then fill in the heading of your answer sheet.

You are to answer all questions in all parts of this examination. Write your answers to the Part A and Part B–1 multiple-choice questions on the separate answer sheet. Write your answers for the questions in Parts B–2, C, and D directly in this examination booklet. All answers should be written in pen, except for graphs and drawings which should be done in pencil. You may use scrap paper to work out the answers to the questions, but be sure to record all your answers on the answer sheet and in this examination booklet.

When you have completed the examination, you must sign the statement printed on your separate answer sheet, indicating that you had no unlawful knowledge of the questions or answers prior to the examination and that you have neither given nor received assistance in answering any of the questions during the examination. Your answer sheet cannot be accepted if you fail to sign this declaration.

The use of any communications device is strictly prohibited when taking this examination. If you use any communications device, no matter how briefly, your examination will be invalidated and no score will be calculated for you.

DO NOT OPEN THIS EXAMINATION BOOKLET UNTIL THE SIGNAL IS GIVEN.
1 The chart below contains both autotrophic and heterotrophic organisms.

<table>
<thead>
<tr>
<th>A</th>
<th>owl</th>
<th>cat</th>
<th>shark</th>
</tr>
</thead>
<tbody>
<tr>
<td>B</td>
<td>mouse</td>
<td>corn</td>
<td>dog</td>
</tr>
<tr>
<td>C</td>
<td>squirrel</td>
<td>bluebird</td>
<td>alga</td>
</tr>
</tbody>
</table>

Organisms that carry out only heterotrophic nutrition are found in
(1) row A, only  (3) rows A and B
(2) row B, only  (4) rows A and C

2 A stable pond ecosystem would not contain
(1) materials being cycled  
(2) oxygen  
(3) decomposers  
(4) more consumers than producers

3 Although all of the cells of a human develop from one fertilized egg, the human is born with many different types of cells. Which statement best explains this observation?
(1) Developing cells may express different parts of their identical genetic instructions.
(2) Mutations occur during development as a result of environmental conditions.
(3) All cells have different genetic material.
(4) Some cells develop before other cells.

4 Humans require organ systems to carry out life processes. Single-celled organisms do not have organ systems and yet they are able to carry out life processes. This is because
(1) human organ systems lack the organelles found in single-celled organisms  
(2) a human cell is more efficient than the cell of a single-celled organism  
(3) it is not necessary for single-celled organisms to maintain homeostasis  
(4) organelles present in single-celled organisms act in a manner similar to organ systems

5 Certain poisons are toxic to organisms because they interfere with the function of enzymes in mitochondria. This results directly in the inability of the cell to
(1) store information  
(2) build proteins  
(3) release energy from nutrients  
(4) dispose of metabolic wastes

6 At warm temperatures, a certain bread mold can often be seen growing on bread as a dark-colored mass. The same bread mold growing on bread in a cooler environment is red in color. Which statement most accurately describes why this change in the color of the bread mold occurs?
(1) Gene expression can be modified by interactions with the environment.
(2) Every organism has a different set of coded instructions.
(3) The DNA was altered in response to an environmental condition.
(4) There is no replication of genetic material in the cooler environment.

7 Asexually reproducing organisms pass on hereditary information as
(1) sequences of A, T, C, and G  
(2) chains of complex amino acids  
(3) folded protein molecules  
(4) simple inorganic sugars

8 Species of bacteria can evolve more quickly than species of mammals because bacteria have
(1) less competition  
(2) more chromosomes  
(3) lower mutation rates  
(4) higher rates of reproduction
9 The diagram below represents the synthesis of a portion of a complex molecule in an organism.

\[
\text{Building blocks} \rightarrow \text{Product}
\]

Which row in the chart could be used to identify the building blocks and product in the diagram?

<table>
<thead>
<tr>
<th>Row</th>
<th>Building Blocks</th>
<th>Product</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1)</td>
<td>starch molecules</td>
<td>glucose</td>
</tr>
<tr>
<td>(2)</td>
<td>amino acid molecules</td>
<td>part of protein</td>
</tr>
<tr>
<td>(3)</td>
<td>sugar molecules</td>
<td>ATP</td>
</tr>
<tr>
<td>(4)</td>
<td>DNA molecules</td>
<td>part of starch</td>
</tr>
</tbody>
</table>

10 Which diagram best represents the relative locations of the structures in the list below?

A–chromosome  
B–nucleus  
C–cell  
D–gene

\[\text{(1) } A \text{ B C D} \quad \text{(2) } D \text{ A B C} \quad \text{(3) } A \text{ D B C} \quad \text{(4) } D \text{ B A C}\]

11 Which nuclear process is represented below?

A DNA molecule → The two strands of → Molecular bases → Two identical DNA molecules are produced.

(1) recombination  
(2) fertilization  
(3) replication  
(4) mutation
12. For centuries, certain animals have been crossed to produce offspring that have desirable qualities. Dogs have been mated to produce Labradors, beagles, and poodles. All of these dogs look and behave very differently from one another. This technique of producing organisms with specific qualities is known as (1) gene replication (3) random mutation (2) natural selection (4) selective breeding.

13. Certain insects resemble the bark of the trees on which they live. Which statement provides a possible biological explanation for this resemblance?

   (1) The insects needed camouflage so they developed protective coloration.
   (2) Natural selection played a role in the development of this protective coloration.
   (3) The lack of mutations resulted in the protective coloration.
   (4) The trees caused mutations in the insects that resulted in protective coloration.

14. When is extinction of a species most likely to occur?

   (1) when environmental conditions remain the same and the proportion of individuals within the species that lack adaptive traits increases
   (2) when environmental conditions remain the same and the proportion of individuals within the species that possess adaptive traits increases
   (3) when environmental conditions change and the adaptive traits of the species favor the survival and reproduction of some of its members
   (4) when environmental conditions change and the members of the species lack adaptive traits to survive and reproduce

15. In what way are photosynthesis and cellular respiration similar?

   (1) They both occur in chloroplasts.
   (2) They both require sunlight.
   (3) They both involve organic and inorganic molecules.
   (4) They both require oxygen and produce carbon dioxide.

16. Which process will increase variations that could be inherited?

   (1) mitotic cell division
   (2) active transport
   (3) recombination of genes
   (4) synthesis of proteins

17. Some cells involved in the process of reproduction are represented in the diagram below.

   ![Diagram of meiosis] - The process of meiosis formed

   (1) cell 1, only
   (2) cells 1 and 2
   (3) cell 3, only
   (4) cells 2 and 3

18. Kangaroos are mammals that lack a placenta. Therefore, they must have an alternate way of supplying the developing embryo with:

   (1) nutrients
   (2) carbon dioxide
   (3) enzymes
   (4) genetic information

19. Which substance is the most direct source of the energy that an animal cell uses for the synthesis of materials?

   (1) ATP
   (2) glucose
   (3) DNA
   (4) starch

20. To increase chances for a successful organ transplant, the person receiving the organ should be given special medications. The purpose of these medications is to:

   (1) increase the immune response in the person receiving the transplant
   (2) decrease the immune response in the person receiving the transplant
   (3) decrease mutations in the person receiving the transplant
   (4) increase mutations in the person receiving the transplant
21 The diagram below represents the cloning of a carrot plant.

Compared to each cell of the original carrot plant, each cell of the new plant will have
(1) the same number of chromosomes and the same types of genes
(2) the same number of chromosomes, but different types of genes
(3) half the number of chromosomes and the same types of genes
(4) half the number of chromosomes, but different types of genes

22 The development of an embryo is represented in the diagram below.

These changes in the form of the embryo are a direct result of
(1) uncontrolled cell division and mutations
(2) differentiation and growth
(3) antibodies and antigens inherited from the father
(4) meiosis and fertilization
23 The diagram below represents an event that occurs in the blood.

Which statement best describes this event?
(1) Cell A is a white blood cell releasing antigens to destroy bacteria.
(2) Cell A is a cancer cell produced by the immune system and it is helping to prevent disease.
(3) Cell A is a white blood cell engulfing disease-causing organisms.
(4) Cell A is protecting bacteria so they can reproduce without being destroyed by predators.

24 In an ecosystem, the growth and survival of organisms are dependent on the availability of the energy from the Sun. This energy is available to organisms in the ecosystem because
(1) producers have the ability to store energy from light in organic molecules
(2) consumers have the ability to transfer chemical energy stored in bonds to plants
(3) all organisms in a food web have the ability to use light energy
(4) all organisms in a food web feed on autotrophs

25 Which factor has the greatest influence on the type of ecosystem that will form in a particular geographic area?
(1) genetic variations in the animals
(2) climate conditions
(3) number of carnivores
(4) percentage of nitrogen gas in the atmosphere

26 Farming reduces the natural biodiversity of an area, yet farms are necessary to feed the world’s human population. This situation is an example of
(1) poor land use
(2) a trade-off
(3) conservation
(4) a technological fix

27 A food chain is represented below.

Grass → Cricket → Frog → Owl

This food chain contains
(1) 4 consumers and no producers
(2) 1 predator, 1 parasite, and 2 producers
(3) 2 carnivores and 2 herbivores
(4) 2 predators, 1 herbivore, and 1 producer

28 A volcanic eruption destroyed a forest, covering the soil with volcanic ash. For many years, only small plants could grow. Slowly, soil formed in which shrubs and trees could grow. These changes are an example of
(1) manipulation of genes
(2) evolution of a species
(3) ecological succession
(4) equilibrium

29 A major reason that humans can have such a significant impact on an ecological community is that humans
(1) can modify their environment through technology
(2) reproduce faster than most other species
(3) are able to increase the amount of finite resources available
(4) remove large amounts of carbon dioxide from the air

30 Rabbits are herbivores that are not native to Australia. Their numbers have increased steadily since being introduced into Australia by European settlers. One likely reason the rabbit population was able to grow so large is that the rabbits
(1) were able to prey on native herbivores
(2) reproduced more slowly than the native animals
(3) successfully competed with native herbivores for food
(4) could interbreed with the native animals
31 Which laboratory procedure is represented in the diagram below?

(1) placing a coverslip over a specimen
(2) removing a coverslip from a slide
(3) adding stain to a slide without removing the coverslip
(4) reducing the size of air bubbles under a coverslip

32 In the United States, there has been relatively little experimentation involving the insertion of genes from other species into human DNA. One reason for the lack of these experiments is that

(1) the subunits of human DNA are different from the DNA subunits of other species
(2) there are many ethical questions to be answered before inserting foreign genes into human DNA
(3) inserting foreign DNA into human DNA would require using techniques completely different from those used to insert foreign DNA into the DNA of other mammals
(4) human DNA always promotes human survival, so there is no need to alter it

33 The development of an experimental research plan should not include a

(1) list of safety precautions for the experiment
(2) list of equipment needed for conducting the experiment
(3) procedure for the use of technologies needed for the experiment
(4) conclusion based on data expected to be collected in the experiment

34 A student performed an experiment to demonstrate that a plant needs chlorophyll for photosynthesis. He used plants that had green leaves with white areas. After exposing the plants to sunlight, he removed a leaf from each plant and processed the leaves to remove the chlorophyll. He then tested each leaf for the presence of starch. Starch was found in the area of the leaf that was green, and no starch was found in the area of the leaf that was white. He concluded that chlorophyll is necessary for photosynthesis.

Which statement represents an assumption the student had to make in order to draw this conclusion?

(1) Starch is synthesized from the glucose produced in the green areas of the leaf.
(2) Starch is converted to chlorophyll in the green areas of the leaf.
(3) The white areas of the leaf do not have cells.
(4) The green areas of the leaf are heterotrophic.
35 The diagram below represents an interaction between parts of an organism.

The term *chemicals* in this diagram represents
(1) starch molecules  (3) hormone molecules
(2) DNA molecules  (4) receptor molecules

36 The diagram below represents two cells, X and Y.

Which statement is correct concerning the structure labeled A?
(1) It aids in the removal of metabolic wastes in both cell X and cell Y.
(2) It is involved in cell communication in cell X, but not in cell Y.
(3) It prevents the absorption of CO₂ in cell X and O₂ in cell Y.
(4) It represents the cell wall in cell X and the cell membrane in cell Y.

37 The graph below provides information about the reproductive rates of four species of bacteria, A, B, C, and D, at different temperatures.

Which statement is a valid conclusion based on the information in the graph?
(1) Changes in temperature cause bacteria to adapt to form new species.
(2) Increasing temperatures speed up bacterial reproduction.
(3) Bacteria can survive only at temperatures between 0°C and 100°C.
(4) Individual species reproduce within a specific range of temperatures.
38 The diagram below shows some of the steps in protein synthesis.

![Diagram of protein synthesis]

The section of DNA being used to make the strand of mRNA is known as a

(1) carbohydrate
(2) gene
(3) ribosome
(4) chromosome

39 An energy pyramid is shown below.

![Energy pyramid]

Which graph best represents the relative energy content of the levels of this pyramid?

(1) ![Graph 1](1)
(2) ![Graph 2](2)
(3) ![Graph 3](3)
(4) ![Graph 4](4)
40 The diagram below represents four different species of bacteria.

Which statement is correct concerning the chances of survival for these species if there is a change in the environment?

(1) Species A has the best chance of survival because it has the most genetic diversity.
(2) Species C has the best chance of survival because it has no gene mutations.
(3) Neither species B nor species D will survive because they compete for the same resources.
(4) None of the species will survive because bacteria reproduce asexually.

41 The diagram below represents possible evolutionary relationships between groups of organisms.

Which statement is a valid conclusion that can be drawn from the diagram?

(1) Snails appeared on Earth before corals.
(2) Sponges were the last new species to appear on Earth.
(3) Earthworms and sea stars have a common ancestor.
(4) Insects are more complex than mammals.
42 On which day did the population represented in the graph below reach the carrying capacity of the ecosystem?

(1) day 11  (3) day 3
(2) day 8  (4) day 5
Base your answers to questions 43 through 47 on the information below and on your knowledge of biology.

Each year, a New York State power agency provides its customers with information about some of the fuel sources used in generating electricity. The table below applies to the period of 2002–2003.

<table>
<thead>
<tr>
<th>Fuel Source</th>
<th>Percentage of Electricity Generated</th>
</tr>
</thead>
<tbody>
<tr>
<td>hydro (water)</td>
<td>86</td>
</tr>
<tr>
<td>coal</td>
<td>5</td>
</tr>
<tr>
<td>nuclear</td>
<td>4</td>
</tr>
<tr>
<td>oil</td>
<td>1</td>
</tr>
<tr>
<td>solar</td>
<td>0</td>
</tr>
</tbody>
</table>

Directions (43 and 44): Using the information given, construct a bar graph on the grid on the next page, following the directions below.

43 Mark an appropriate scale on the axis labeled “Percentage of Electricity Generated.” [1]

44 Construct vertical bars to represent the data. Shade in each bar. [1]
45 Identify one fuel source in the table that is considered a fossil fuel. [1]

___________________________________

46 Identify one fuel source in the table that is classified as a renewable resource. [1]

___________________________________

47 State one specific environmental problem that can result from burning coal to generate electricity. [1]

_______________________________________________________________________
_______________________________________________________________________
Base your answers to questions 48 and 49 on the diagram below that shows some interactions between several organisms located in a meadow environment and on your knowledge of biology.

48 A rapid decrease in the frog population results in a change in the hawk population. State how the hawk population may change. Support your answer. [1]

_______________________________________________________________________
_______________________________________________________________________

49 Identify one cell structure found in a producer in this meadow ecosystem that is not found in the carnivores. [1]

___________________________________

50 Individuals of some species, such as earthworms, have both male and female sex organs. In many cases, however, these individuals do not fertilize their own eggs.

State one genetic advantage of an earthworm mating with another earthworm for the production of offspring. [1]

_______________________________________________________________________
_______________________________________________________________________
Base your answers to questions 51 and 52 on the diagram below and on your knowledge of biology. The diagram represents six insect species.

51 A dichotomous key to these six species is shown below. Complete the missing information for sections 5.a. and 5.b. so that the key is complete for all six species. [1]

**Dichotomous Key**

1. a. has small wings ...............................................go to 2  
   b. has large wings...............................................go to 3

2. a. has a single pair of wings.........................Species A  
   b. has a double pair of wings .........................Species B

3. a. has a double pair of wings ..............................go to 4  
   b. has a single pair of wings...........................Species C

4. a. has spots .........................................................go to 5  
   b. does not have spots...................................Species D

5. a. ___________________________..............Species E  
   b. ___________________________..............Species F

52 Use the key to identify the drawings of species A, B, C, and D. Place the letter of each species on the line located below the drawing of the species. [1]
Proteins on the surface of a human cell and on a bird influenza virus are represented in the diagram below.

53 In the space below, draw a change in the bird influenza virus that would allow it to infect this human cell. [1]

54 Explain how this change in the virus could come about. [1]

55 Identify the relationship that exists between a virus and a human when the virus infects the human. [1]
Part C

Answer all questions in this part. [17]

Directions (56–67): Record your answers in the spaces provided in this examination booklet.

Base your answers to questions 56 and 57 on the information below and on your knowledge of biology.

Insulin is a hormone that has an important role in the maintenance of homeostasis in humans.

56 Identify the structure in the human body that is the usual source of insulin. [1]

_____________________________________

57 Identify a substance in the blood, other than insulin, that could change in concentration and indicate a person is not secreting insulin in normal amounts. [1]

_______________________________________________________________________

Base your answers to questions 58 and 59 on the information below and on your knowledge of biology.

The hedgehog, a small mammal native to Africa and Europe, has been introduced to the United States as an exotic pet species. Scientists have found that hedgehogs can transfer pathogens to humans and domestic animals. Foot-and-mouth viruses, *Salmonella*, and certain fungi are known pathogens carried by hedgehogs. As more and more of these exotic animals are brought into this country, the risk of infection increases in the human population.

58 State one negative effect of importing exotic species to the United States. [1]

_______________________________________________________________________

_______________________________________________________________________

59 State one way the human immune system might respond to an invading pathogen associated with handling a hedgehog. [1]

_______________________________________________________________________

_______________________________________________________________________
The last known wolf native to the Adirondack Mountains of New York State was killed over a century ago. Several environmental groups have recently proposed reintroducing the wolf to the Adirondacks. These groups claim there is sufficient prey to support a wolf population in this area. These prey include beaver, deer, and moose. Opponents of this proposal state that the Adirondacks already have a dominant predator, the Eastern coyote.

60 State one effect the reintroduction of the wolf may have on the coyote population within the Adirondacks. Explain why it would have this effect. [1]

_______________________________________________________________________
_______________________________________________________________________

61 Explain why the coyote is considered a limiting factor in the Adirondack Mountains. [1]

_______________________________________________________________________
_______________________________________________________________________

62 State one ecological reason why some individuals might support the reintroduction of wolves to the Adirondacks. [1]

_______________________________________________________________________
_______________________________________________________________________
You have been assigned to design an experiment to determine the effects of light on the growth of tomato plants. In your experimental design be sure to:

- state one hypothesis to be tested [1]
- identify the independent variable in the experiment [1]
- describe the type of data to be collected [1]

In some land plants, guard cells are found only on the lower surfaces of the leaves. In some water plants, guard cells are found only on the upper surfaces of the leaves. Explain how guard cells in both land and water plants help maintain homeostasis. In your answer be sure to:

- identify one function regulated by the guard cells in leaves [1]
- explain how guard cells carry out this function [1]
- give one possible evolutionary advantage of the position of the guard cells on the leaves of land plants [1]
Base your answers to questions 65 and 66 on the information below and on your knowledge of biology.

Scientists are increasingly concerned about the possible effects of damage to the ozone layer.

65 Damage to the ozone layer has resulted in mutations in skin cells that lead to cancer. Will the mutations that caused the skin cancers be passed on to offspring? Support your answer. [1]

_______________________________________________________________________
_______________________________________________________________________

66 State two specific ways in which an ocean ecosystem will change (other than fewer photosynthetic organisms) if populations of photosynthetic organisms die off as a result of damage to the ozone layer. [2]

_______________________________________________________________________
_______________________________________________________________________
_______________________________________________________________________
_______________________________________________________________________
_______________________________________________________________________
_______________________________________________________________________

67 Lawn wastes, such as grass clippings and leaves, were once collected with household trash and dumped into landfills. Identify one way that this practice was harmful to the environment. [1]

_______________________________________________________________________
_______________________________________________________________________
68 In preparation for an electrophoresis procedure, enzymes are added to DNA in order to

(1) convert the DNA into gel
(2) cut the DNA into fragments
(3) change the color of the DNA
(4) produce longer sections of DNA

69 Paper chromatography is a laboratory technique that is used to

(1) separate different molecules from one another
(2) stain cell organelles
(3) indicate the pH of a substance
(4) compare relative cell sizes

70 A marathon runner frequently experiences muscle cramps while running. If he stops running and rests, the cramps eventually go away. The cramping in the muscles most likely results from

(1) lack of adequate oxygen supply to the muscle
(2) the runner running too slowly
(3) the runner warming up before running
(4) increased glucose production in the muscle
Base your answers to questions 71 through 73 on the information below and on your knowledge of biology.

A series of investigations was performed on four different plant species. The results of these investigations are recorded in the data table below.

### Characteristics of Four Plant Species

<table>
<thead>
<tr>
<th>Plant Species</th>
<th>Seeds</th>
<th>Leaves</th>
<th>Pattern of Vascular Bundles (structures in stem)</th>
<th>Type of Chlorophyll Present</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>round/small</td>
<td>needle-like</td>
<td>scattered bundles</td>
<td>chlorophyll a and b</td>
</tr>
<tr>
<td>B</td>
<td>long/pointed</td>
<td>needle-like</td>
<td>circular bundles</td>
<td>chlorophyll a and c</td>
</tr>
<tr>

<td>round/small</td>
<td>needle-like</td>
<td>scattered bundles</td>
<td>chlorophyll a and b</td>
</tr>
<tr>
<td>D</td>
<td>round/small</td>
<td>needle-like</td>
<td>scattered bundles</td>
<td>chlorophyll b</td>
</tr>
</tbody>
</table>

71 Based on these data, which two plant species appear to be most closely related? Support your answer. [1]

Plant species ____________ and __________
_______________________________________________________________________
_______________________________________________________________________

72 What additional information could be gathered to support your answer to question 71? [1]
_______________________________________________________________________
_______________________________________________________________________

73 State one reason why scientists might want to know if two plant species are closely related. [1]
_______________________________________________________________________
_______________________________________________________________________
Base your answers to questions 74 and 75 on the data table below and on your knowledge of biology.

<table>
<thead>
<tr>
<th>Species of Finch</th>
<th>Preferred Foods</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>nuts and seeds</td>
</tr>
<tr>
<td>B</td>
<td>worms and insects</td>
</tr>
<tr>
<td>C</td>
<td>fruits and seeds</td>
</tr>
<tr>
<td>D</td>
<td>insects and seeds</td>
</tr>
<tr>
<td>E</td>
<td>nuts and seeds</td>
</tr>
</tbody>
</table>

74 Based on its preferred food, species B would be classified as a

(1) decomposer  
(2) producer  
(3) carnivore  
(4) parasite  

75 Which two species would most likely be able to live in the same habitat without competing with each other for food?

(1) A and C  
(2) B and C  
(3) B and D  
(4) C and E
Base your answers to questions 76 and 77 on the experimental setup shown below.

76 On the diagram below, draw in the expected locations of the molecules after a period of one hour.  [1]

77 When starch indicator is used, what observation would indicate the presence of starch?  [1]

_______________________________________________________________________
_______________________________________________________________________

78 State one reason why some molecules can pass through a certain membrane, but other molecules can not.  [1]

_______________________________________________________________________
_______________________________________________________________________
79 A plant cell in a microscopic field of view is represented below.

The width \((w)\) of this plant cell is closest to

(1) 200 \(\mu m\)
(2) 800 \(\mu m\)
(3) 1200 \(\mu m\)
(4) 1600 \(\mu m\)

80 The diagram below represents a plant cell in tap water as seen with a compound light microscope.

Which diagram best represents the appearance of the cell after it has been placed in a 15% salt solution for two minutes?

(1) 
(2) 
(3) 
(4)
Record your answers to Part A and Part B–1 on this answer sheet.

Part A

1 . . . . . .  11 . . . . . .  21 . . . . . .
2 . . . . . .  12 . . . . . .  22 . . . . . .
3 . . . . . .  13 . . . . . .  23 . . . . . .
4 . . . . . .  14 . . . . . .  24 . . . . . .
5 . . . . . .  15 . . . . . .  25 . . . . . .
