FOR TEACHERS ONLY

The University of the State of New York

REGENTS HIGH SCHOOL EXAMINATION

GEOMETRY

Wednesday, June 20, 2012 — 9:15 a.m. to 12:15 p.m., only

SCORING KEY AND RATING GUIDE

Mechanics of Rating

The following procedures are to be followed for scoring student answer papers for the Regents Examination in Geometry. More detailed information about scoring is provided in the publication Information Booklet for Scoring the Regents Examinations in Mathematics.

Do not attempt to correct the student’s work by making insertions or changes of any kind. In scoring the open-ended questions, use check marks to indicate student errors. If the student’s responses for the multiple-choice questions are being hand scored prior to being scanned, the scorer must be careful not to make any stray marks on the answer sheet that might later interfere with the accuracy of the scanning.

Unless otherwise specified, mathematically correct variations in the answers will be allowed. Units need not be given when the wording of the questions allows such omissions.

Each student’s answer paper is to be scored by a minimum of three mathematics teachers. No one teacher is to score more than approximately one-third of the open-ended questions on a student’s paper. On the student’s separate answer sheet, for each question, record the number of credits earned and the teacher’s assigned rater/scorer letter.

Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Raters should record the student’s scores for all questions and the total raw score on the student’s separate answer sheet. Then the student’s total raw score should be converted to a scale score by using the conversion chart that will be posted on the Department’s web site at: http://www.p12.nysed.gov/apda/ on Wednesday, June 20, 2012. Because scale scores corresponding to raw scores in the conversion chart may change from one administration to another, it is crucial that, for each administration, the conversion chart provided for that administration be used to determine the student’s final score. The student’s scale score should be entered in the box provided on the student’s separate answer sheet. The scale score is the student’s final examination score.
Part I

Allow a total of 56 credits, 2 credits for each of the following. Allow credit if the student has written the correct answer instead of the numeral 1, 2, 3, or 4.

General Rules for Applying Mathematics Rubrics

I. General Principles for Rating

The rubrics for the constructed-response questions on the Regents Examination in Geometry are designed to provide a systematic, consistent method for awarding credit. The rubrics are not to be considered all-inclusive; it is impossible to anticipate all the different methods that students might use to solve a given problem. Each response must be rated carefully using the teacher’s professional judgment and knowledge of mathematics; all calculations must be checked. The specific rubrics for each question must be applied consistently to all responses. In cases that are not specifically addressed in the rubrics, raters must follow the general rating guidelines in the publication Information Booklet for Scoring the Regents Examinations in Mathematics, use their own professional judgment, confer with other mathematics teachers, and/or contact the State Education Department for guidance. During each Regents Examination administration period, rating questions may be referred directly to the Education Department. The contact numbers are sent to all schools before each administration period.

II. Full-Credit Responses

A full-credit response provides a complete and correct answer to all parts of the question. Sufficient work is shown to enable the rater to determine how the student arrived at the correct answer.

When the rubric for the full-credit response includes one or more examples of an acceptable method for solving the question (usually introduced by the phrase “such as”), it does not mean that there are no additional acceptable methods of arriving at the correct answer. Unless otherwise specified, mathematically correct alternative solutions should be awarded credit. The only exceptions are those questions that specify the type of solution that must be used; e.g., an algebraic solution or a graphic solution. A correct solution using a method other than the one specified is awarded half the credit of a correct solution using the specified method.

III. Appropriate Work

Full-Credit Responses: The directions in the examination booklet for all the constructed-response questions state: “Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc.” The student has the responsibility of providing the correct answer and showing how that answer was obtained. The student must “construct” the response; the teacher should not have to search through a group of seemingly random calculations scribbled on the student paper to ascertain what method the student may have used.

Responses With Errors: Rubrics that state “Appropriate work is shown, but …” are intended to be used with solutions that show an essentially complete response to the question but contain certain types of errors, whether computational, rounding, graphing, or conceptual. If the response is incomplete; i.e., an equation is written but not solved or an equation is solved but not all of the parts of the question are answered, appropriate work has not been shown. Other rubrics address incomplete responses.

IV. Multiple Errors

Computational Errors, Graphing Errors, and Rounding Errors: Each of these types of errors results in a 1-credit deduction. Any combination of two of these types of errors results in a 2-credit deduction. No more than 2 credits should be deducted for such mechanical errors in any response. The teacher must carefully review the student’s work to determine what errors were made and what type of errors they were.

Conceptual Errors: A conceptual error involves a more serious lack of knowledge or procedure. Examples of conceptual errors include using the incorrect formula for the area of a figure, choosing the incorrect trigonometric function, or multiplying the exponents instead of adding them when multiplying terms with exponents. A response with one conceptual error can receive no more than half credit.

If a response shows repeated occurrences of the same conceptual error, the student should not be penalized twice. If the same conceptual error is repeated in responses to other questions, credit should be deducted in each response.

If a response shows two (or more) different major conceptual errors, it should be considered completely incorrect and receive no credit.

If a response shows one conceptual error and one computational, graphing, or rounding error, the teacher must award credit that takes into account both errors; i.e., awarding half credit for the conceptual error and deducting 1 credit for each mechanical error (maximum of two deductions for mechanical errors).
Part II

For each question, use the specific criteria to award a maximum of 2 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(29)  [2] $\triangle T'A'P'$ is graphed and labeled correctly.

[1] Appropriate work is shown, but one computational or graphing error is made, but an appropriate triangle is graphed and labeled.

or

[1] Appropriate work is shown, but one conceptual error is made, but an appropriate triangle is graphed and labeled.

or

[1] The translation is performed correctly, but the triangle is not labeled or is labeled incorrectly.

or

[1] $T'(-6,3)$, $A'(-3,3)$, and $P'(-3,-1)$ are stated, but no graph is drawn.

[0] $(-6,3)$, $(-3,3)$, and $(-3,-1)$ are stated, but they are not labeled, and no graph is drawn.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(30)  [2] 27, and appropriate work is shown, such as a labeled diagram.

[1] Appropriate work is shown, but one computational error is made, but an appropriate value for $m\angle 2$ is found.

or

[1] Appropriate work is shown, but one conceptual error is made, but an appropriate value for $m\angle 2$ is found.

or

[1] 27, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
Neither, and an appropriate justification is given.

[1] Appropriate work is shown, but one computational error is made, but an appropriate determination is made and justified.

or

[1] Appropriate work is shown, but one conceptual error is made, but an appropriate determination is made and justified.

or

[1] Slopes of $-\frac{1}{2}$ and $\frac{1}{2}$ are identified, but the word “neither” is not stated.

[0] Neither, but no work is shown, and no justification is given.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

A correct construction is drawn showing all appropriate arcs, and the angle bisector is drawn.

[1] Appropriate construction arcs are drawn, but one construction error is made, such as not drawing the angle bisector ray.

or

[1] Appropriate work is shown, but a correct bisector is constructed on either $\angle A$ or $\angle C$.

[0] A drawing that is not an appropriate construction is shown, such as constructing the perpendicular bisector of a side of the triangle.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(33) [2] 3, and appropriate work is shown.

[1] Appropriate work is shown, but one computational or rounding error is made, but an appropriate number of cans is found.

or

[1] Appropriate work is shown, but one conceptual error is made, but an appropriate number of cans is found.

or

[1] The lateral surface area of the cylinder is calculated, but no further correct work is shown.

or

[1] 3, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(34) [2] Both loci are drawn correctly, and two points of intersection are labeled with an X.

[1] Appropriate work is shown, but one graphing error is made, but appropriate points of intersection are labeled.

or

[1] Appropriate work is shown, but one conceptual error is made, but appropriate points of intersection are labeled.

or

[1] Both loci are drawn correctly, but the points of intersection are not labeled or are labeled incorrectly.

[0] One locus is drawn correctly, but no further correct work is shown.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
Part III

For each question, use the specific criteria to award a maximum of 4 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(35) \[4\] A complete and correct proof that includes a concluding statement is written.

\[3\] A proof is written that demonstrates a thorough understanding of the method of proof and contains no conceptual errors, but one statement or reason is missing or is incorrect, or the concluding statement is missing.

\[3\] \(\triangle ABE \cong \triangle DCE\) is proven, but no further correct work is shown.

\[2\] A proof is written that demonstrates a good understanding of the method of proof and contains no conceptual errors, but two statements or reasons are missing or are incorrect.

\[2\] A proof is written that demonstrates a good understanding of the method of proof, but one conceptual error is made.

\[1\] Some correct relevant statements about the proof are made, but three or four statements or reasons are missing or are incorrect.

\[0\] The “given” and/or the “prove” statements are written, but no further correct relevant statements are written.

\[0\] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
[4] \( A'"(5,4), B''(5,-1), C''(2,-1), \) and \( D''(2,6), \) and appropriate work is shown.

[3] Appropriate work is shown, but one computational, graphing, or labeling error is made, but appropriate coordinates for \( A''B''C''D'' \) are stated.

or

[3] Trapezoid \( A''B''C''D'' \) is graphed and labeled correctly, but the coordinates are not stated or are stated incorrectly.

[2] Appropriate work is shown, but two or more computational, graphing, or labeling errors are made, but appropriate coordinates for \( A''B''C''D'' \) are stated.

or

[2] Appropriate work is shown, but one conceptual error is made, such as performing the reflection over the \( x \)-axis first, but appropriate coordinates for \( A''B''C''D'' \) are stated.

or

[2] Appropriate work is shown to find \( A'(5,-4), B'(5,1), C'(2,1), \) and \( D'(2,-6), \) but no further correct work is shown.

[1] Appropriate work is shown, but one conceptual error and one computational, graphing, or labeling error are made, but appropriate coordinates for \( A''B''C''D'' \) are stated.

or

[1] Trapezoid \( A'B'C'D' \) is graphed and labeled correctly, but no further correct work is shown.

or

[1] \( A''(5,4), B''(5,-1), C''(2,-1), \) and \( D''(2,6), \) but no work is shown.

[0] \( (5,4), (5,-1), (2,-1), \) and \( (2,6), \) but no work is shown.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(37)  

[4] 10 and 12, and appropriate work is shown.

[3] Appropriate work is shown, but one computational, factoring, or simplification error is made, but appropriate lengths are found.

[2] Appropriate work is shown, but two computational, factoring, or simplification errors are made, but appropriate lengths are found.

or

[2] Appropriate work is shown, but one conceptual error is made, but appropriate lengths are found.

or

[2] Appropriate work is shown to find \( RT = 10 \), but no further correct work is shown.

[1] Appropriate work is shown, but one conceptual error and one computational, factoring, or simplification error are made, but appropriate lengths are found.

or

[1] Appropriate work is shown to find 4, the length of \( \overline{TM} \), but no further correct work is shown.

or

[1] \( TM \cdot RM = QM \cdot SM \) and \( \frac{PR}{PS} = \frac{PS}{PT} \) or equivalent equations are written, but no further correct work is shown.

or

[1] 10 and 12, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
Part IV

For this question, use the specific criteria to award a maximum of 6 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(38)  [6] Both equations are graphed correctly, and \((3, -2)\) is stated.

[5] Appropriate work is shown, but one computational or graphing error is made, but appropriate coordinates are stated.

[4] Appropriate work is shown, but two or more computational or graphing errors are made, but appropriate coordinates are stated.

\[
\text{or}
\]

[4] Both equations are graphed correctly, but the coordinates are not stated or are stated incorrectly.

[3] Appropriate work is shown, but one conceptual error is made, but appropriate coordinates are stated.

\[
\text{or}
\]

[3] \((3, -2)\) is stated, but a method other than graphing is used.

[2] Appropriate work is shown, but one conceptual error and one computational or graphing error are made, but appropriate coordinates are stated.

\[
\text{or}
\]

[2] Only the parabola is graphed correctly.

[1] Appropriate work is shown, but one conceptual error and two or more computational or graphing errors are made, but appropriate coordinates are stated.

\[
\text{or}
\]

[1] Only the line is graphed correctly.

\[
\text{or}
\]

[1] \((3, -2)\), but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

Regents Examination in Geometry
June 2012
Chart for Converting Total Test Raw Scores to Final Examination Scores (Scale Scores)

The Chart for Determining the Final Examination Score for the June 2012 Regents Examination in Geometry will be posted on the Department’s web site at: http://www.p12.nysed.gov/apda/ on Wednesday, June 20, 2012. Conversion charts provided for previous administrations of the Regents Examination in Geometry must NOT be used to determine students’ final scores for this administration.

Online Submission of Teacher Evaluations of the Test to the Department

Suggestions and feedback from teachers provide an important contribution to the test development process. The Department provides an online evaluation form for State assessments. It contains spaces for teachers to respond to several specific questions and to make suggestions. Instructions for completing the evaluation form are as follows:

2. Select the test title.
3. Complete the required demographic fields.
4. Complete each evaluation question and provide comments in the space provided.
5. Click the SUBMIT button at the bottom of the page to submit the completed form.
